Storage and retrieval of product files

Fictional case data and worked reasoning

In this case, a manufacturer places its product on the market on 15 March 2028. The documented support period runs until 30 September 2041. A security update is made available on 20 April 2034. The archive team has set 15 March 2038 as a single retention date for all documents. The documentation and user information are available for the supported version. Direct access to the update was last tested without using the affected device model.

Test point	Purpose or comparison	Observation	Decision
15.03.2038	**Technical File or later end of support**	Support until 30.09.2041	Keep up to at least 30.09.2041
User information	Own access for the right stand	Support also keep up to 30.09.2041 at least as long as reachable	
Security update	**10 years from deployment or later end of support**	Provision on 20.04.2034	Available at least up to 20.04.2044

Expected result

The computerised archive mark for each category and verifiable sample for the relevant role.

The data are recorded in the document type and the appropriate time origin.

Match ten-year brand and later end of support.

Access the right product and test with the right roll.

Counter-test and next decision

In the pattern, set the end of support to September 30, 2046. The later end of support will also be decisive for the existing security update. Then check the new storage and access proof.

Storage and retrieval of product files

For your observation, specify a findable document.

Plan storage and accessibility for files, user information and any available security update.

Verification identification, legal entity and date of processing and responsible body

Product and market documentation

Official documents, user information or security update

Dated start of deadline and confirmed end of support

Determined tarpaulin and designated storage location

Real sample and responsible role

Storage and retrieval of product files

Refer remedial and post-test to the original test order.

Findings and supporting evidence

Open call, security measure and date

Tested follow-up test with date, observation and version documentation

Binding storage and availability decision

Release by and on the open order and date
